Covering Email (2.6.20):

Today Kay Sambell and I have posted the enclosed paper on my website <u>sally-brown.net</u> (her website post will follow shortly). It's our latest informal guide for busy practitioners "The changing landscape of assessment: some possible replacements for unseen, time-constrained, face-to-face invigilated exams".

We've been talking for a while now about how it might be possible to build on some of the energy and creative thinking that colleagues have been putting into replacing old-style on-site exams with virtual alternatives, which often seem to be better options than traditional exams. We are keen to see these improvements retained once the current crisis is over, so we're saying let's not just go back to doing it how we used to do it! The core of the paper is a table exploring pros and cons of diverse alternatives, with useful references to some of the brilliant blogs and other work colleagues have been producing during lockdown. We hope you will find it useful: like all our previous work on these lines, we see it as aan Open Access resource, so we are happy for it to be shared and used widely (but it would be lovely if colleagues told us about where you are using it if you do so). We welcome your comments and further thoughts

The changing landscape of assessment: some possible replacements for unseen, time-constrained, face-to-face invigilated exams

Professor Kay Sambell, Edinburgh Napier University and Professor Sally Brown, Independent consultant

Introduction

In Spring 2020, just about every university in the world was faced with a requirement to move from a substantial diet of assessing student learning on campus, in person, to methodologies that could be undertaken remotely due to the Coronavirus shutdown. Higher Education Institutions (HEIs) moved at breakneck speed to introduce new ways of assessing remotely, aiming first and foremost to ensure that no student was disadvantaged in the current crisis conditions, while at the same time ensuring quality imperatives were met. Achieving this target was undertaken notwithstanding substantial challenges, with HEIs ensuring that the perfect did not become the enemy of the achievable. The changes were often radical, innovative and creative, and there has been a huge upsurge of feeling that in reverting back to more normal conditions, the benefits of new approaches must be retained and decisions made under pressure would not be reversed without thinking through how to ensure that the long term effect on university assessment is beneficial.

Some assessment formats proved particularly challenging and onerous to rapidly switch, including, for instance, making emergency plans for a substantial diet of unseen, time-constrained, invigilated exams to be undertaken remotely. This is the area we predominantly address in this current piece, although we will also touch upon assessments that are normally undertaken on-site but which couldn't be held due to lockdown. This current guidance note builds on our earlier work on 'Contingency planning: exploring rapid alternatives to face to face assessment' and 'Fifty tips for replacements for time-constrained, invigilated on-site exams' (Brown and Sambell, 2020 a and b), both of which were produced in the earliest stages of the rapid switch. The aim is now to help those who are currently planning for a phased, socially-distanced and gradual return to campus at a point when the precise picture for the immediate future is still pretty uncertain and likely to change on a daily basis. This practitioner-orientated advice, with its comparative table of pros and cons of alternative forms of assessment below therefore, aims to act as a catalyst for teaching teams who wish to pause and think about possible adjustments to traditionally-held face-to-face assessment regimes for the academic sessions which are due to begin in a matter of weeks. While this planning phase is less frantic in one sense, in another sense, we still face the massive challenge of preparing for future uncertainty. Strict lockdown measures may, for example, be relaxed soon only to be enforced once again with the arrival of new virus spikes, and campus-based life seems likely to be under considerable pressure for some time to come, with priority attention for students' physical access to campuses initially trained on those aspects of teaching and assessment practice that are impossible to be delivered online, for the time being at least. The sensible option is likely to be to plan to make the very best of remote delivery, if needs be in case of future se

umbrella of the emergency approvals and regulations procedures that universities have been instigating, so the guidance note assumes that any changes suggested here will be undertaken on that basis.

The current pandemic has undoubtedly exposed some of the practical frailties of on-site existing assessment practice, which could in the longer term valuably become more authentic, fit-for-purpose, robust and resilient. But the immediate response across the sector has also highlighted some extremely positive opportunities for those who seek to modernise assessment in order to promote student learning more readily. Here we now seek to focus, primarily, on some of the possibilities for educationally positive immediate changes that could be made as an initial step, and to highlight some relatively modest adjustments to some routine assessment scenarios which might help colleagues to cope with the demands of the upcoming academic year 2020/21 and may also allow us to strengthen and intensify the features of assessment that can **actually improve student learning**.

Building Bridges to the Future: Assessment which Promotes Learning

The RSA argue that there are transformational opportunities that can lead to lasting change for the good coming out of the current crisis:

"As we think of 'bridges to the future', we are thinking too of the variety of measures and activities that have been put in place during the crisis response, from those which may be most promising signs of new ways of doing things to those we see as only ever temporary." (RSA,2020).

They suggest four potential post-crisis response measures:

- End: We've done these things to respond to immediate demands, but they are specific to the crisis;
- Restart: We've had to stop these things to focus on the crisis, but they need to be picked up in some form;
- Let go: We've been unable to stop doing things that were already or are now unfit for purpose;
- **Amplify:** We've been able to try these new things and they show some signs of promise for the future.

In this guide we focus, then, predominantly, on accentuating the latter.

Our guidance is underpinned, as far as possible, by evidence-informed approaches on what works in other contexts to support this new endeavour, with the additional aim to design and implement good fit-for-purpose educational practices which sustain beyond the immediate dilemmas posed by the pandemic. To do so we argue that:

a. Old-style traditional exams could be used more **rarely**, recognising that all-too-often they have limited value as authentic assessment methodologies. A case will need to be made as to why these are used, rather than relying on them as the default methodology.

- b. As part of techniques to **risk-assess and design for future crisis planning**, where these types of exams are used, questions will need to be designed in future that can readily be adapted for use in different scenarios, i.e. face-to-face on site, remotely managed or virtually.
- c. The **language of assessment questions** should be radically reviewed to focus less on recollection and memorisation of information, and more on its usage within specific contexts: we need to consider the 'learning outcomes' required by each exam question to promote more explaining, reasoning, applying and arguing, and less describing and listing (Hendry 2020).
- d. There should be a greater reliance on **reflection on practice** in examinations to ensure that students' alignment with the work being produced is authenticated.
- e. Greater use be made of **asynchronous** assessments, since these are less susceptible to crisis contexts, and can cope better with students accessing exams in different time zones. Where time-constrained synchronous exams are deemed vital, however, it could be a prudent as well as an educationally valid strategy to plan to **prerelease** materials for students to work on, so that the timed examination window itself focuses on their ability to use their preparations in ways that require them to think on their feet (after Allan, 2020).
- f. Feedback processes should become an important and integral part of assessment practices and be built carefully into any redesigns.
- g. Exam-based assessment should not result in 'sudden death' of students' progress and life chances, with less reliance on performance on a single occasion with unseen tests.
- h. Off-site exam questions should have **clear notional workloads** (e.g. if 24 hours are allowed, a guidance note could indicate that students are expected to spend no more than three on the task) and **prescribed word counts** (otherwise the workload for the markers is likely to be unmanageable).
- i. Replacements to exams must be **inclusive** and allow for reasonable adjustments for students with special or additional needs, as indeed do current exams, so has your team thought through some of the benefits, as well as the challenges, or opportunities to adjust assessment formats now?

Next, in the main body of the paper we review some of the options and adjustments we have seen used locally and globally to adjust on-site exams for remote working. We draw extensively on scholarship in the area, to integrate assessment more fully into the learning experiences of students. Some of the methods we discuss are already widely used in many HEIs around the world and some are newly minted as a result of the Coronavirus crisis. We set out below some descriptions of the methodology, together with advantages and disadvantages of each and some key points to note if you plan to adjust or replace unseen time-constrained invigilated exams and other site-constrained methodologies with these approaches. We particularly focus, where possible, on alternatives which promote assessment's **authenticity**. Building on Arnold (2019) and Sambell, McDowell and Montgomery (2013), we take authenticity to include 'employability', academic integrity and the development of professional skills (Sotiradou et al, 2019), but also to embrace other forms of realism, such as application of subject-knowledge to the local community, or learners developing the disciplinary ways of thinking and practicing of our research communities. Authenticity also implies, for us, an appropriate level of cognitive challenge, and the development of evaluative judgment which is the lynchpin of lifelong learning (Villaroel et al, 2020). Ideally, going forward, it also will find better ways to embrace authentic feedback processes (Dawson, Carless and Lee, 2020). We also draw attention, where appropriate, to the longer-term possibilities for universal design and tactics which address issues of

inclusivity. At the end we provide a range of references, including some very useful resources that have been produced at speed in these unprecedented and challenging times.

Conversely, they may concentrate so much on the medium that they neglect the message. There can be technical issues about recording and data files might be very large to submit electronically. There can be substantial problems concerning 'digital equity' in that some students will have significantly better access to good quality kit than others.	rather than technical specifications when they are working form home without access to loan equipment.
Evaluative comparisons and judgments Staff can set evaluative tasks which require students to carefully choose and evaluate say 3 websites or similar on a given topic (after Hendry, 2020).	Careful and challenging question-setting for tightly focused assessment tasks (see right-hand column for concrete suggestions) can focus students on achieving high-order learning outcomes while focusing on choosing personalised source materials to evaluate/review. Students are likely to perceive that the task requires original thought and their own voice, so boosting a sense of academic integrity and authenticity, as well as allowing you to spot similarities. Avoids students simply cutting	Students who have previously become familiar with tried and tested surface approaches to gathering academic material for their reports or essays may need support/briefing and practice in tackling the task effectively. If the task involves sustained access to websites or data bases, digital equity may be an issue.	Hendry (2020) advises: "Avoid: "Explain the effects of obesity on public health". Instead use: "Create a set of five criteria and standards for judging the quality of websites about obesity, and apply your criteria/standards to three websites, one of which is the best and one of which is the worst" (adapted from 'Designing out plagiarism: A brief guide for busy academics', University of Surrey) Avoid: "Compare and contrast economic theories X and Y". Instead use: "Locate three websites or printed texts that deal with X economic theory, then contrast the views expressed in these sources with the economic situation in country Y, and make recommendations for this country's economic future" (adapted from Carroll, J., &

Alternative assessment methods that have been used to replace onsite exams: what are they?	Advantages	Disadvantages	Points to note
	and pasting from the wealth of material they can find, while allowing students the flexibility to source a variety of material (rather than rely on a few sources).		Appleton, J., 2001, 'Plagiarism: A good practice guide')".
Reflective Journals Students are required to write about their experiences and/or practice, relating it to their reading and knowledge gained from to their classes and providing critical analysis of what they have learned.	Reflective writing can be a powerful means of enabling students to demonstrate complex learning outcomes including critical thinking. Students can deepen their learning by reflection, and can demonstrate analysis, creativity and originality. When reflective journaling works well, students continually develop their learning through reflection. Such analytic abilities can enhance employability and develop evaluative judgement.	Students may not fully understand what is required of them in reflective writing. Many students, at the start at least, write extensively and uncritically and may need extensive guidance on how to write more systematically. Unless constraints are required, the length of their writing may make marking unmanageable. Some students may feel they need to write what they think you want to read.	Students might find Godfrey (2020) useful in understanding what critical analysis and reflection mean in academia. Carefully-guided discussion of illustrative exemplars useful. It can be really helpful to suggest tight suggested word limits on several sections to produce a critical incident account as a starting point to reflective writing e.g.: Choose and outline an incident that you have experienced in your last placement (200 words). Describe the context in which you were working (200 words). What action did you take? (200 words) Why did you choose that particular course of action? (200 words). How did your choice of actions relate to your university classes and reading in the area? (200 words including at least 3 references). How would you do things differently next time? (200 words). What did you learn from this experience? (200 words). How were you changed (if at all) in your orientation and approach by this, or were your

Alternative assessment methods that have been used to replace onsite exams: what are they?	Advantages	Disadvantages	Points to note
			previous convictions borne out? (200 words).
Annotated bibliographies Students are required to list and discuss a number of references on a particular topic, explaining how they located them, why they chose these rather than other references, what they learned from them and how they can apply the learning to their particular contexts. They are often used early in a programme when students are learning how to manage information prior to essay writing.	This is a useful way to engage students with the relevant literature, rather than just collecting information on it, thereby building information literacy. Candidates can demonstrate their depth of study of the sources and the breadth of the source material they have reviewed. Plagiarism is limited. Although students may choose the same sources, it would be easy to spot identical annotations.	Students may find themselves overwhelmed by the sheer range of resources available and may have poor information retrieval skills at the outset. Some students from cultures where set texts are used, or where teachers mandate the reference sources they are to use, may find the open-endedness of the task scary.	A collection of annotated bibliographies can be turned into a resource-bank and issued to future students as a starting place for them to develop their own bibliographies.
In-tray/box exercises Students are presented with a hard copy or virtual dossier of documents and other resources to review well before the exam with no idea of the questions being asked. They are given ample time to review and annotate these resources in preparation. When the question is presented, they respond to the situation, drawing on the resources in the dossier to support their choices of actions/recommendations in a	This kind of assessment is strong on authenticity, as it measures the skills the candidates will need in their future careers. Students can demonstrate their fitness-to-practice by justifying how they would decide to do what they chose to do. If the reading/preparatory opportunity is offered in advance and tasks/new incidents are represented in real time this approach mitigates against plagiarism and tends to	There tends to be a great deal of preparation in putting together the documents and materials required (although the resources can be used in a modified form in future years if the questions and incidents are different). If real-time incidents are offered mid exam to test students' flexibility, these are reliant on students' ready access to secure and stable internet links.	In-tray exercises in paper form have been used for many years in many contents including Accountancy and medicine. The drawback of hard copy unseen versions tended to be the complexity of providing paper documents for each candidate within the exam setting: this is no longer a problem if virtual assessments are undertaken.

Creative Artefacts Traditional written exams are rarely used in many subjects aligned to the creative industries, but the current situation has shown many problems with on-site assessments which may include for example, sculptures, paintings, architectural designs, engineering models. It's often not just the artefacts themselves that are assessed but also the process by which they have been achieved, and work in progress is often central to both summative and formative assessment. In normal times assessment in situ would be the norm, but currently many are using photographic or video evidence of output but these are likely to need a reflective commentary as well as other forms of documentation of progress to	Assessment of artefacts such as these is high on validity and authenticity. Artefacts are useful as evidence of achievement to show prospective employers. Reflective commentaries on work in progress can help demonstrate the thinking that underpins the creative production. Documented evidence provides indicators of the standards of evidence of achievement for future students to work towards.	It's really hard to assure interassessor reliability unless criteria are really effectively negotiated and shared among the assessment team (see HEA (2012) Tenet 4 on constructing shared standards in communities.	'You are aiming to adapt to online approaches rather than to replicate face-to face studio practice' (Orr, 2020) In seeking evidence of achievement, it is quite useful to ask for notebooks and evidence of work in process when this is produced remotely to ensure that the person submitting was the person who created it. This shift from just 'making' to 'making and explaining' is also invaluable in encouraging reflective approaches to creative production and revision which can demonstrate core learning outcomes See a range of examples in practice-based contexts https://gladhe.com/covid19 , especially the video Moving Online, Creative Art and Design, Staffordshire Uni, which explicitly discusses some advantages of moving to digital submission.

the assessor. Assessment criteria are known in advance, and may include the ability to articulate clearly, coherently and competently the answers to reasonable questions arising from the presentation/performance.	visual, physical) skills often important in future employment. Peer-assessment can make presentations/performances a better learning experience for all. Can include ability to respond to spontaneous questions from the assessor and/or the audience.	May be hard to strike a balance between mastery of content, and skills of presentation. 'Raising the bar': expected standards can become higher over a series of presentations/performances as assessors expect more and more. In presentations, 'impression' marks can be associated with the quality of presentation slides or resource materials used in the presentations. Where multiple assessors are involved, inter-assessor reliability can be problematic. Broadband issues may also be problematic.	As above, briefing/training and rehearsal are important to give each student a fair chance to succeed since some will have done these before and others won't. In post covid-19 days it may be more sensible to rely on recorded and submitted rather than live presentations to allow for technical issues Recordings and other records need to be made and kept for QA/ external examiners for any live presentations.

Working in partnership with students

Arguably many of these innovative approaches can offer greater possibilities for students to contribute to the assessment design, development and quality assurance processes, which Healey *et al* (2016) for example consider offers significant benefit to both staff and students. Students we suggest can in redesigning assessment post-Covid19, potentially:

- a. Help us design briefings that are clear, meaningful and recognizably authentic, thereby helping to avoid excessive numbers of queries from students who don't understand what is required.
- b. Advise us about special difficulties students might have complying with requirements, that might not be obvious to the assessment designers.
- c. Provide feedback on formats and approaches that require technologies and applications that students may not have at home (good broadband, exclusive use of laptops, the correct software, quiet places to work etc.).

d. Advise on the extent that feedback could be helpful on replacement assessments: in many ways many innovative approaches will have more in common with course work than traditional exams, so feedback will be more relevant.

This session's assessment design has not in all cases permitted this, but we argue that in making assessment work for the best in future scenarios, we would do well to enlist students to assist us in these and other ways.

Conclusion

We have been faced this year with a fast-moving and unpredictable context and as discussed it seems likely that we will see significant further churn before the situation is fully resolved. That things can **never be the same as formerly** is unquestionable so it is more important than ever, to design assessments that minimise stress for students, boost their sense of authenticity and reduce the temptation for potentially hard-pressed individuals to submit their assessments using any means possible (Lawrence, 2020), while at the same time making them manageable for staff, authentic, as well as reliable and valid while maintaining the assurance of standards. Ownership, voice and manageability are all key design factors which impact positively on academic integrity (Sambell et al, 2019) so tactics which avoid over-assessment are also likely to be helpful all round, with the important benefit of lightening the marking load for assessors, too.

We are continuing to think actively about how we could build on these ideas in the longer term, to make radical and substantial reconfigurations to assessment in the future, moving beyond replacing exams to other assessments. We welcome your views and feedback.
